EDUCATION

Universidade Federal da Paraiba (UFPB)

Joao Pessoa, Brasil

BS in Data Science and Artificial Intelligence

June 2022 – August 2026

EXPERIENCE

Data Scientist Researcher @ Moises

11/2025 – Present

- Designed and implemented scalable ETL pipelines for large-scale music datasets, automating ingestion, preprocessing, and feature extraction to support company's models.
- Benchmarked and evaluated Automatic Pitch Correction models, analyzing audio quality and tuning accuracy to guide model selection and optimization.
- Improved pitch correction accuracy from 73% to 88% by refining dataset selection and introducing a targeted model training strategy.

Data Scientist Intern @ Dharma-AI

07/2025 - 10/2025

- Optimized OCR models via GPTQ quantization, achieving a 40% reduction in GPU usage and 20% faster inference while validating output quality using an LLM-as-a-Judge framework.
- Ensured high data quality for OCR enhancement by conducting rigorous EDA and sanity checks on high-volume Portuguese textual datasets, identifying key patterns and eliminating noise.
- Engineered specialized coding datasets and enriched them using Google Vertex AI, accelerating the preparation phase for training specialized Small Language Models (SLMs).

Data Scientist @ TRIL Lab

09/2023 – 09/2025

- Trained ML models on treated data to identify and classify high-potential carbon collection and storage hubs, improving the selection efficiency of high-yield sites by over 25%.
- Developed TutorIA, an educational chatbot powered by an LLM, supporting students with complex math and ENEM essay guidance, achieving a response accuracy of approximately 90%.
- Standardized development and deployment workflows by containerizing Node.js applications and AI API services using Docker, ensuring environmental parity and accelerating CI/CD cycles.

AI Engineer @ Dhart

09/2024 - 02/2025

- Implemented LLM-based solutions integrated with WhatsApp to automate user queries and facilitate immediate, secure access to accounting data.
- Created CrewAI Agents and ETL pipeline, automating data retrieval via text-to-code generation, which resulted in a 40% time savings for accounting staff.
- Optimized the RAG pipeline through rigorous EDA, refining data selection to reduce the data load by over 90% while simultaneously boosting retrieval performance.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript/TypeScript

AI/ML: PyTorch, Scikit-learn, LangChain, OpenAI, RAG, Hugging Face

Backend & Databases: Node.js, FastAPI, PostgreSQL, MongoDB, Redis

Data & Visualization: Pandas, NumPy, Power BI, Plotly, Web Scraping

Cloud & Tools: AWS, GCP, Docker, Git
